

Dr. VICTOR HUGO ALMANZA VELOZ

Position: Research Associate. Instituto de Ciencias de la Atmósfera y Cambio Climático
Universidad Nacional Autónoma de México
Circuito Exterior s/n, 04510
SNII 1, Pride B
victor.almanza@atmosfera.unam.mx
Tel: (55) 5622 4800, Ext. 81825

RESEARCH INTEREST

Multi-disciplinary international collaboration in atmospheric science projects. Joint chemical and meteorological data assimilation using ensemble Kalman filter and variational methods; design, conduct and analyze regional air quality and climate simulations focusing on Short-lived Climate Pollutants (SLCPs); implement model code in High Performance Computing platforms; model performance evaluation using observational data from monitoring networks and satellite products; soot formation in open flames using computational combustion; and impact of wildfire emissions on regional air quality.

EDUCATION

Sc. D. Atmospheric Science Instituto Mexicano del Petróleo (IMP), Mexico - Dissertation title: "Tula Refinery sour gas flaring emissions: numerical estimation and regional air quality modeling" - Authored 3 publications in peer-reviewed journals	2014
M.S. Atmospheric Science IMP, Mexico	2006
B.S. Environmental Engineering Instituto Politécnico Nacional (IPN), Mexico Class Rank: 1	2002

PROFESSIONAL EXPERIENCE

<u>Current position</u> Instituto de Ciencias de la Atmósfera y Cambio Climático (ICAYCC), UNAM <i>Research Associate</i>	2020 - current
Centro de Investigación Científica y de Educación Superior de Ensenada <i>Consultant</i>	2019 - 2020
LTM Center for Energy and the Environment <i>Research Scientist</i>	2018 - 2020
Massachusetts Institute of Technology Molina Center for Energy and the Environment <i>MIT Molina Postdoctoral Fellow</i>	2013 - 2018

PROJECTS

ICAYCC UNAM (Pi/Co-PI)

2020 – current

Data Assimilation (CAME) ongoing

- Co-Principal investigator. Developing an operational air quality forecasting system based on the 3D variational approach for Central Mexico. Funded by the Environmental Commission of the Megalopolis (CAME).

Chemical Reanalysis (PAPIIT UNAM) ongoing

- Principal investigator. Analyzing peroxyacetyl nitrate (PAN) long-term data from chemical reanalysis for the Megalopolis of Central Mexico.

Data Assimilation (PAPIIT UNAM) completed

- Principal investigator. Joint Project in collaboration with NASA Ames and University of Colorado Boulder for conducting ensemble Kalman filter data assimilation using WRF-Chem/DART.
- Conducting ensemble model evaluation using UPP/MET.

Data Assimilation (DGTIC-UNAM)

- Principal investigator. Organized the research visit of Dr. Arthur Mizzi to ICAYCC in November 2022.
- Implemented the forward operator of MaxDOAS NO₂ observations into WRF-Chem/DART in collaboration with Dr. Mizzi.
- Part of the results presented at the *10th International Workshop on Air Quality Forecasting Research 2021* by Dr. Mizzi.

Impact of COVID-19 emissions reductions in the Mexico Megalopolis (DGTIC-UNAM)

- Principal Investigator. Key findings included the offset of massive emissions reductions and a decrease in PBL height by regional biomass burning emissions.
- Some results were presented in virtual workshops organized by government officials of the Environmental Secretariat of the Mexico Megalópolis.

LTM Center for Energy and the Environment

2019 - 2020

UCMEXUS-CONACYT Project

- Principal Co-Investigator together with Dr. Lynn Russell from UC San Diego, in organizing and participating in a capacity building workshop and an international symposium of air quality at UNAM Mexico.
- Responsible of designing the content of the workshop in collaboration with Ravan Ahmadov (NOAA), Douglas Loewe (U. of Manchester) and Arthur Mizzi (U. of Colorado)
- Co-participant of the capacity building workshop for using the WRF/WRF-Chem model in collaboration with Ravan Ahmadov (NOAA), Douglas Loewe (U. of Manchester) and Arthur Mizzi (U. of Colorado).

CICESE

2019 -2020

- Responsible of evaluating the WRF/WRF-Chem model performance of the operational chemical forecast for the Gulf of Mexico using MET/UPP.
- Lead the evaluation of the WRF-FLEXPART model using Chaman cluster at CICESE.

MIT / MCE2

2014 - 2018

NSF Black Carbon Project

- Led the project team in downscaling the NASA GISS-E2-R model to conduct regional climate simulations with WRF for biomass burning applications. Wrote the computer scripts to set-up, run, post-process, evaluate and analyze the data. These results were used to estimate future biomass burning emissions.
- Led the modeling team to evaluate the WRF-Chem model performance using annual data of meteorology and air quality from monitoring networks, remote sensing data from the Tropical Rainfall Measuring Mission (TRMM) and cloud fraction from MODIS products

CARB CalEnviroScreen Project

- Collaborated with a multi-disciplinary team in designing, writing, discussing and reviewing the trajectories analyses of a research proposal funded by the California Air Resources Board (CARB). Led the modeling activities and developed all the computer scripts to efficiently run FLEXPART-WRF for the US-Mexico Border region. Identified potential emission sources with direct benefit to the CalEnviroScreen tool.

GEF SLCF Project

- Led the model evaluation with MET-UPP for the project on SLCPs sponsored by the Global Environment Facility (GEF). These activities were crucial for the modeling set-up. Analyzed the results and wrote a section for the final report.
- Automated the WRF model evaluation using the NCAR's Model Evaluation Tools (MET) package and UPP in the Yellowstone cluster and upgraded to Cheyenne cluster (NCAR). Wrote the computer scripts to unify data formats, set-up, run, post-process and visualize data and results at all stages of the evaluation process.

CAME Ozone Modeling Project

- Collaborated with the modeling team to modify the code of WRF-Chem for analyzing the influence of vertical diffusion on model performance of chemical fields.

MCE2-EDF Methane Emissions Inventory

- Estimated methane emissions for the oil and gas industry in Mexico in collaboration with Mexican Ministry of the Environment and the Environmental Defense Fund (EDF). The QA/QC protocol improved the estimates and location of emission sources with a direct benefit for the Mexican National Emissions Inventory and global emissions inventories. Analyzed the results and wrote several sections of the final report.

MILAGRO Project

- Led the backward trajectories analysis with FLEXPART-WRF using data from the Cal-Mex and MILAGRO field campaign. Wrote the computer scripts to set-up, run, and post-process the results. Improved the interpretation of chemical data and source attribution in the US-Mexico border and the outskirts of MCMA
- Estimated soot emissions from Refinery flares at industrial scale with CFD and conducted the reactive modeling of emissions with WRF-Chem.

ECAIM Project

- Collaborated with scientists from Mexico and Saint Louis University in reviewing some of the main findings from the MILAGRO and MCMA-2003 field campaigns as part of a research project in Mexico. Wrote the final report and highlighted recommendations for modeling and deployment of measuring equipment.

MARPOL Project

- Actively contributed to the QC and modeling activities in an inter-disciplinary project for the Commission for Environmental Cooperation (CEC) on the MARPOL agreement. Improved the model-ready files of ship emissions which were the basis for the modeling activities. The results were presented to officials from the Mexican Navy and the Mexican Secretariat of Environment.

IMP WRF-Chem Workshop

- Invited to Lecture at the Mexican Institute of Petroleum (IMP) on using, installing and running WRF-Chem. Prepared all the workshop material, including the model installation and set-up of using the IMP's workstations.

IMP

2006 – 2013

Graduate Research Assistant

- Estimated for the first time in Mexico, soot and combustion by-products emissions of a refinery sour gas flare at industrial scale using Computational Fluid Dynamics. Modified the code of the combustion model in OpenFOAM (C++) to include radiation from soot. The results suggested a significant underestimation of VOCs from flaring activities in Mexico and a potential contribution of flaring activities to the regional ozone levels.
- Assimilated observational data from the MILAGRO field campaign (radiosondes, radar wind profilers and surface measurements) and global upper and surface data from NCEP ADP into WRF-Chem. Wrote the scripts to run the Objective Analysis (OBSGRID) in Fortran and bash.
- Designed a sensitivity study to select an optimal configuration for WRF-Chem.

- Modified WRF-Chem for 1-way nesting simulations with NDOW before this feature was included in a later version. This significantly saved CPU time
- Identified a potential emission source in the outskirts of Mexico City using back-trajectory analyses.

IMP projects

2004 – 2006

- Member of team that estimated the refractive index of sub-micrometric particles using inversion methods based on meta-heuristic algorithms (simulated annealing and genetic algorithms). Wrote the computer programs, analyzed and discussed results. Collaborated in preparing the final report. The results significantly improved previous estimates from scientists at IMP.
- Lead a project team to install, test and run MM5 using the Intel Fortran compiler. Wrote the final report. This work set the basis to install WRF.
- Collaborated with a project team to estimate reaction rates of butadiene with the hydroxyl radical using quantum chemistry methods (Gaussian) in CRAY platform. Analyzed and discussed the results.

UPIBI – IPN

1998 – 2002

Undergraduate Research Assistant

- Applied non-linear time series analysis to air pollutants databases in Mexico. Estimated the Lyapunov exponent, correlation dimension and multifractal spectrum. Some of the results suggested similarity to the Zaslavski Map and were published in the Mexican Journal of Physics. Wrote the research paper and analyzed the results.

COMPUTER SKILLS

- Linux, WRF/WRF-Chem, OBSGRID, FLEXPART-WRF, MET, UPP, VAPOR, ParaView, OpenFOAM, TISEAN, Fortran, MATLAB, OCTAVE, NCO, CDO, NCL, wgrib, bash shell, awk, sed, gnuplot, MS Office.

CERTIFICATE COURSES

- Earth System Predictability Across Timescales Workshop, April 10 – 12, 2024, NCAR, Colorado, EU, virtual.
- MUSICA Tutorial (online) 2021 – 2022
- Chimere Tutorial (online) 2021
- Hysplit Tutorial (online) 2021
- MIT Translational Fellows Program, 2018
- Global Warming Science, MITx, 2016.
- Satellite Remote Sensing of Particulate Matter Air Quality: Data, Tools, Methods and Applications (Aka AOD-PM), NASA, 2015.

Posdoctorate

Dr. Gilberto Maldonado Pacheco. Asimilación de datos de CO y NO2 usando WRFDA-Chem. Proyecto CAME: Ensemble para alerta temprana de episodios y pronóstico de calidad del aire. Componente 1. “Asimilación de datos de química atmosférica y meteorológicos para la región de la Megalópolis”. (09/2024 – 05/2026).

LEADERSHIP AND PROFESSIONAL ACTIVITIES

Postdoctoral Fellow 2013 -2018

- Worked independently on a research proposal aimed at modifying the chemistry solution in a chemistry transport model. Researchers from PNNL, University of Iowa, and NOAA evaluated the technical merit.
- Lectured at the Mexican Institute of Petroleum (IMP).
- **Reviewer for Energy & Fuels** (2016), **Urban and Climate** (2017) and **Atmospheric Pollution Research** (2017).

Graduate Research 2010

- Led the compilation, installation, testing and running of Linux (several distributions), MM5, WRF/WRF-Chem, MPICH, Intel Fortran, OpenFOAM, SALOME, and FLEXPART-WRF.

GURME-WMO workshop (Mexico) 2009

- Led the installation and testing of Linux and WRF-Chem in 33 PCs for the workshop at the Secretariat of Environment in Mexico (SEMARNAT). Worked in collaboration with Dave Gill (NCAR) and Steven Peckham (NOAA).

Undergraduate research 2002 - 2004

- New generations of students continued my research on non-linear time series analysis of atmospheric pollutants
